PUBLICATIONS

"Scholarship Eligibility Profiling Using K-Means Clustering and Comparative Machine Learning" (ICTIM 2026)
1st Author | Accepted for Publication

August 2026

- Developed a two-stage machine learning framework using 10,798 PISA 2022 Brazil student records to generate scholarship eligibility profiles from academic, socioeconomic, and ICT access indicators. Applied K-Means clustering for pseudo-label generation and compared five classification algorithms, with SVM achieving 99.0% accuracy, 0.983 Macro F1-score, and 0.985 mean Macro F1 in five-fold cross-validation. Conducted clustering validation, feature ablation, permutation importance, leakage analysis, and robustness testing to evaluate model reliability and interpretability.
